ELKHAN KHANLAROV

Fullstack Developer

+994 50 733 38 16 elxanxanlarov@gmail.com Baku, Azerbaijan

ABOUT ME

Fullstack Developer with a solid track record of delivering web, desktop, and system-level applications for real-world businesses. Skilled across the entire stack from UI/UX implementation with React to backend APIs, database design, and server deployment.

WORK EXPERIENCE

Fitechnology | 2025 May - Present

Fullstack Developer

Developed and maintained multiple business management, access control, and automation systems for real clients using React.js, Node.js, PHP, MySQL, and network technologies.

Ephesus Beach Resort – Access Control & QR Turnstile System

Built a fullstack turnstile access management system where reception staff register customers and send QR-based access links via WhatsApp. Customers scan QR codes for entry while the system tracks all entrance activities and statistics through dedicated admin and reception panels. Initially deployed on a local server with DNS-based internal access, later migrated to cPanel by rewriting the backend in PHP due to hosting limitations.

Arnold Fitness – Membership & Turnstile Management System

Developed a gym membership and card-based turnstile system where customers are registered by reception staff and assigned subscription packages with payment tracking. The system manages membership duration, entry limits, and card-based access control. Also implemented manual entry authorization for customers without their physical access cards.

Zumrud Women's Club – Customer & Sales Management Platform

Developed a customer registration and entry/exit tracking system integrated with instructor assignment and scheduling management. Built an administration panel for managing packages, instructors, lesson schedules, and customer activities. Integrated product sales functionality for items such as protein supplements with inventory and sales management features.

Fi Home – Store & Inventory Management System

Built a sales and inventory management platform for retail operations, including stock tracking, expense management, daily cash delivery reports, inter-branch product transfers, product category management, credit sales handling, and automated receipt generation.

Lankaran Springs Hotel – Captive Portal & Radius Authentication System

Configured and deployed a captive portal system using Aruba Controller and FreeRADIUS on Ubuntu Server. Worked with SSID setup, AAA profiles, server-group configuration, Layer 3 authentication, and CLI management. Implemented automatic customer authentication and internet activation workflows with admin-side monitoring and database integration for customer access logs.

Ficlub.az

Full Stack Developer

Developed a training and course management platform with features for course creation, instructor management, and participant tracking.

Salex.az

Full Stack Developer

Developed an AI-powered sales assistant platform using Next.js and implemented a RAG-based AI system for customer communication and product recommendations.

Evimfix.az

Full Stack Developer

Developed a real estate platform with property listings, search and filtering features, user management, and admin tools.

Yalli.org

Frontend Developer

Developed a platform for Azerbaijanis living abroad using React.js and later migrated it to Next.js to improve performance and SEO.

CRM (Baku Design Academy)

Frontend Developer

Contributed to the development of a Sales CRM system, building interfaces for customer management and sales pipeline tracking.

EDUCATION

AZMIUK | 2023 September - 2025 June

Operation of Water Supply Systems

I studied Operation of Water Supply Systems in college, where I learned the basics of water distribution systems, pipeline operations, maintenance, and technical system monitoring.

Mastercode Academy | 2023 July - 2024 January

Frontend Developer

During this course, I learned the fundamentals of frontend development with a primary focus on JavaScript, including DOM manipulation, API integration, asynchronous operations, and responsive user interface development.

Matrix Academy | 2024 Febuarly - 2024 September

Frontend Developer

Focused mainly on React.js and modern frontend application development, including component-based architecture, React Hooks, state management, routing, API integration, and building responsive web applications.

SKILLS

- Frontend: React.js, Next.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS
- Backend: Node.js, Express.js, PHP, RESTful APIs, Prisma ORM
- Databases: MySQL, PostgreSQL, MariaDB, Redis
- DevOps & Hosting: Git, GitHub, Docker, cPanel, Vercel, Hetzner, Linux Server (Ubuntu)
- System & Hardware Integration: Access Control Systems, QR & Turnstiles, Captive Portal, FreeRADIUS, Aruba Controller
